Countdown Startclock

The Countdown Startclock is specially developed for sports where starting on a fixed time schedule is very important. These are competitions like in Cycling, Car rally or other sports with Time-Trails. For the fixed start procedure of these events the Countdown Startclock is the best solution. This Countdown Startclock can be set up to a fixed interval time for the start from a few seconds until a maximum of 10 minutes. The Countdown Startclock automatically counts down from the preset time until "0". After this the Countdown sequence automatically starts again from the time which has been preset. The last 5 seconds before "0" are also shown with 5 red lamps and exactly on "0" a green lamp lights up and a beep-signal will be given.

The Countdown Startclock is the best solution for a fair and correct start at all competitions with a fixed interval start time. By means of using this clock a nice and fair start procedure is guaranteed. The Countdown Startclock has yellow fluorescent numbers with a height of 15 centimetre. This gives a good readability to a maximum distance of around 35 meters. At the

front side 5 red lamps and 1 green lamp are visible in order to support and give a clear Countdown Start procedure. It is also possible to connect a loudspeaker horn which will give a start signal with a volume of 110 decibel. The size of the Countdown Startclock is 50x31x21 centimetres and the weight is 8 kg. The Clock can also be placed on a tripod stand.
